

## Faculty Guidance for COVID Policy Violations

This guidance offers progressive actions faculty teaching face to face courses during the fall 2020 semester may take in a situation where a student does not comply with [Covid19 Student Policies](#). Students are expected to abide by these policies and students failing to do so should be referred to the [Center for Student Rights and Responsibilities](#).

Starting in the fall 2020 semester, if a student refuses to wear a facial covering in the classroom and/or comply with other campus COVID-19 safety protocols, it is recommended that faculty take the following progressive actions to elicit student compliance:

### If a student is not wearing a required facial covering:

- Tell the student to wear a facial covering; if available,
- Offer the student a new, unused facial covering, OR
- Tell the student to leave the classroom to retrieve/obtain a facial covering; if the student refuses to comply,
- Tell the student to leave class for the remainder of the class period; if the student refuses to leave,
- End the class session or meeting; if the student refuses to leave,
- Contact University Police if the student displays violent or aggressive behavior
- Report the behavior to the Center for Student Rights and Responsibilities for followup

### If a student is not practicing physical distancing:

- Tell the student to stay six feet from others; if the student refuses to comply,
- Tell the student to leave class for the remainder of the class period; if the student refuses to comply,
- End the class session or meeting; if the student refuses to leave,
- Contact University Police if the student displays violent or aggressive behavior
- Report the behavior to the Center for Student Rights and Responsibilities for followup

### If a student does not clean their work space:

- Tell the student to clean/disinfect the workspace they used; if they fail to comply,
- Report the behavior to the Center for Student Rights and Responsibilities for followup if student refuses to clean/disinfect the workspace
